SUMMARY

Passionate Computer Science student pursuing a BSc (Hons) in Computer Science with a minor in Robotics and IoT, with strong practical experience in game development and immersive technologies. Skilled in designing and developing interactive 3D applications, AR/VR experiences, and physics-based games using technologies such as Unity, C#, Vuforia, and XR frameworks. Experienced in building real-world projects involving marker-based and markerless augmented reality, virtual reality interactions, and multiplayer game mechanics. Possesses strong problem-solving, teamwork, and technical development skills, with a keen interest in creating innovative, user-focused gaming and extended reality solutions.

EDUCATION

RV University, Bangalore 2027
BSc (Hons.) Computer Science (Minor: Robotics and IoT)

National Centre For Excellence, Bangalore 2023
Class 12 (PCMC)

National Centre For Excellence, Bangalore 2021
Class 10

SKILLS

Programming: C#, C, Python, Java, SQL, HTML
Tools & Technologies: Unity, Vuforia Engine, Git, GitHub, API Integration
Core Concepts: Object-Oriented Programming, Data Structures, Game Development, AR/VR Systems

PROJECTS

AR Navigation System (In Progress)

- Developing an Augmented Reality (AR) navigation system using Unity that overlays real-time directional paths and waypoints on the university campus for intuitive wayfinding.
- Implementing plane detection, Image detection, spatial mapping, and directional guidance features to provide users with visual arrows and route visualization in the real-world environment.

Master Caster – 3D First-Person Fishing Game

- Developed a 3D first-person fishing game in Unity within 48 hours for Global Game Jam, featuring physics-based casting mechanics using raycasting and force calculations.
- Implemented bite detection, catching mechanics, and responsive player controls with smooth camera movement.

AR Sushi Menu

- Built a marker-based AR application using Unity and Vuforia Engine that allows users to scan menu markers and instantly visualize interactive 3D sushi models in their real environment.
- Added features such as model rotation, scaling, and information pop-ups to enhance user engagement and provide an immersive dining experience.

VR Rage Room

- Designed and developed a VR rage room environment in Unity, allowing users to interact with and destroy physics-based objects using VR controllers.
- Focused on comfortable VR interactions, hand tracking mechanics, physics optimization, and performance tuning to ensure smooth 90+ FPS experience.

CERTIFICATIONS

- Unity Essential Pathway
- Unity Mobile AR Development
- Unity VR Development
- Unity Certified Associate: Game Developer Courseware

BADGES

- Unity Essentials: Editor Essentials, 3D Essentials, Programming Essentials, 2D Essentials, Audio Essentials
- Unity Mobile AR Development: Marker-Based AR, Plane Detection, Face Filters, AR Experience Design
- Unity VR Development: Interaction Systems, Ergonomics, Optimization, Custom Development
